Subject: Gastroenterology clinic utilisation data for January, February and March 2022

Q1 I am currently a graduate trainee working on a project where I am investigating the current practices used to schedule outpatient appointments with a view to make recommendations to improve clinical utilisation.

I am currently at the data collection stage of the project and was interested to learn that just 47% of Gastroenterology clinics were fully booked in Q4 (2021/22) and the other specialties within medicine were not far off this figure. I feel it would be really interesting to compare the percentage of clinics that are fully booked at Alder Hey in January, February and March 2022 and was hoping you could provide this data.

Any information you could provide would be greatly appreciated. Even if it was just the raw data for Gastroenterology within this timeframe.

A1 [For gastroenterology out-patients \(includes consultants, registrars, specialist nurses and AHP\)](#)

January 2022: 72.8%
February 2022: 74.1%
March 2022: 76.8%
