

Ophthalmology Department
Bar Reading Instructions
Information for young people

Aim

The aim of this exercise is to improve the ability to use your two eyes as a pair, and to focus whilst controlling the position of your eyes.

Step 1

- Hold the book approximately 1/3m (33cm) in a slightly depressed (lower than usual) reading position.
- The bar must be held vertically against the bottom of the page in a central position.

A photograph showing the bar on a page

- Your Orthoptist will advise you of the size of print to begin with.

Step 2

- Read the print normally ensuring both of your eyes are open and try to ignore the bar.
- It is important to keep your head very still and upright so that you do not look around the bar.
- If your two eyes are working together as a pair the bar will not impair your reading. You will be aware of two bars or bar splitting to enable you to read.

Step 3

- Move the bar to each new page of print.
- Once you have finished your exercise you **must** relax your eyes. This can be done by closing your eyes or looking into the distance for a couple of minutes.
- Your Orthoptist will advise you on how often and for how long you should do this exercise.

Tips

- We advise that you perform this exercise supervised by an adult. This is to make sure that you keep both eyes open and do not move your head.
- If you are finding this exercise difficult use a larger print.
- Remember this is an exercise and you need to keep trying to do it.
